

SPECIFICATION:

At page 35, line 9, after "...adjacent to the long balloon." , please add:

As is shown in Fig. 23, the two balloons 117, 129 are adjacent to one another and more accurately, are arranged laterally adjacent to one another. Such relationship is more commonly referred to as "side by side" and is not to be confused with an end to end configuration. Rather than sharing a common longitudinal axis, the longitudinal axis of one balloon is spaced apart from the longitudinal axis of the other balloon wherein the two axes are arranged substantially parallel to one another.
